16. Final provisions

1. Introduction

1.1 The Internet Service Gateway (ISG) offers functions for the control, setting and checking of data of various STIEBEL ELTRON products and of products manufactured by companies associated with STIEBEL ELTRON as defined in Para. 15 et seq. AktG (German Stock Corporation Act) (the STIEBEL ELTRON Group), insofar as these products are intended for corresponding services.

1.2 The functions for the control, setting and checking of data can be applied within the user's own network ("local functions" of the ISG) or from outside the user's own network, i.e. remote control and diagnosis ("online functions" of the ISG).

Each use of the ISG requires acceptance of local terms of use when first accessing the local SERVICEWELT site of the ISG, which differ from these Terms of Use for the online functions and can be accessed at www.stiebel-eltron.com/terms-of-use/isg-local.

1.3 A prerequisite for the use of the online functions is the existence of a user relationship with STIEBEL ELTRON as provider of the online functions regulated by these Terms of Use. This user relationship is independent of the purchase of the ISG, which is normally made through a qualified contractor. Further agreements may be necessary for the use of remote control and/or remote diagnosis by parties other than STIEBEL ELTRON customer service, in particular for data protection reasons; see 2.2.

2. Registration for using the online functions

2.1 A user relationship is entered into as part of the registration of the respective ISG via the local ISG site with the URL "SERVICEWELT". The ISG must be connected to the internet for this registration, usually by connecting the ISG to a network that is connected to the internet. Access to the ISG interface is browser-based, so only terminal devices with browser functionality are suitable.

2.2 During registration, the user is prompted to consent to these Terms of Use and to the forwarding of certain data to STIEBEL ELTRON and certain companies associated with STIEBEL ELTRON as defined in Para. 15 et seq. AktG, which are listed on www.stiebel-eltron.de/recipients/isg, for customer service purposes. Registration is not possible without consent to these points; consent in all other matters is optional, i.e. consent to receiving advertising for ISG-related service contracts. The user may authorise further forwarding of certain data to themselves or third parties at a later date, in order to enable remote diagnosis and/or remote control for themselves or the respective third parties. These agreements may be subject to a fee as a service of a separate service contract; they are made in particular for data protection reasons in a separate, written procedure, which the user can obtain information about by visiting www.stiebel-eltron.com/ISG-services, for example.

2.3 During registration, an email address, the user's first and last name, the device location (street, postcode, town, country), the user's telephone number, the product designation and the product ID (serial number) must be provided. The user is responsible for ensuring that the data provided is correct, especially the email address. STIEBEL ELTRON does not carry out any special verification as to the correctness of the data, especially the email address. STIEBEL ELTRON is not responsible for any consequences that may arise if incorrect data, especially an incorrect email address, is provided. In particular, any emails sent to that email

address are considered to have been effectively delivered even if they have not actually been delivered due to an invalid email address.

2.4 During registration, the user can check and correct their details using the "Back" function.

2.5 An email is sent to the user at the email address provided containing a numerical code that the user must enter in the browser interface of the terminal device used in order to complete the registration process.

2.6 The completion of registration marks the start of the user relationship for the online functions, which the user can then use in accordance with these Terms of Use.

2.7 Insofar as the device is made available to third parties, the user is responsible for also informing them of these Terms of Use and for passing on the obligations arising herefrom. This applies irrespective of the reasons for giving a third party access, which might for example be joint use or rental of the premises where the ISG is installed.

3. Technical integration and system requirements

3.1 The ISG is integrated via a cable into an existing network (LAN) operated by the user at their own expense. For the use of all functions, including the online functions, a connection to the other product as defined in 1.1 is also required.

3.2 An internet connection is generally not required for using the ISG. The local functions of the ISG can be used without an internet connection. Without an internet connection, the online functions requiring data exchange with the STIEBEL ELTRON portal server cannot be used. The ISG connects to the STIEBEL ELTRON portal server via the user's internet connection.

3.3 STIEBEL ELTRON points out that the availability and bandwidth of the user's network and internet connection have a substantial impact on the ability to use the ISG and its functions. If the network or internet connection is unstable, or the bandwidth is inadequate, usage of the functions may be limited or not possible.

4. Availability of the functions

4.1 STIEBEL ELTRON endeavours to ensure that the online functions are subject to a minimum of interruptions. In doing so, STIEBEL ELTRON aims for continuous availability (24/7, 365 days a year).

4.2 Temporary usage restrictions may occur due to maintenance work on the portal server or as a result of *force majeure*. STIEBEL ELTRON endeavours to carry out scheduled maintenance work during periods of low use.

5. Support from STIEBEL ELTRON and any other manufacturers

5.1 STIEBEL ELTRON products are generally sold through qualified contractors. Thus, these contractors are always the first point of contact for users – this does not affect any separate guarantees provided by STIEBEL ELTRON. STIEBEL ELTRON shall provide the qualified contractors with the appropriate information, enabling them to offer the user comprehensive support in the event of problems relating to the functions and ISG operated in conjunction with devices from STIEBEL ELTRON.

5.2 STIEBEL ELTRON shall provide the user with information for activating the online functions of the ISG, including integration into the existing network, for STIEBEL ELTRON products together with the ISG, in particular in the quick guide. This and other information can also be found on the STIEBEL ELTRON website.

5.3 For devices not manufactured by STIEBEL ELTRON (see 1.1), the respective manufacturer may be responsible instead of STIEBEL ELTRON with regard to the issues regulated in 5.1 and 5.2. If required, the user can find the respective manufacturer by checking the label on the enclosure of the ISG, or alternatively the operating instructions supplied with the ISG.

6. User obligations

6.1 Throughout the duration of the user relationship, the user must comply with all of the provisions set forth in these Terms of Use and with the operating instructions.

6.2 The user is prohibited from taking any action that could result in a fault or other adverse impact on the online functions. In particular, the user is not permitted to modify the software of the ISG or related products if the modification might affect the functions and their use and has not been authorised by STIEBEL ELTRON. Furthermore, the additional installation on the ISG of other software not purchased from STIEBEL ELTRON is not permitted.

6.3 There must be no interference with systems provided by STIEBEL ELTRON or third parties which facilitate provision of the online functions. The user may only establish a connection to the STIEBEL ELTRON portal server with the ISG, via the associated STIEBEL ELTRON portal and any STIEBEL ELTRON apps.

6.4 The user is not entitled to carry out reverse engineering with regard to the ISG website, unless this is expressly permitted by law. The user is also forbidden to otherwise attempt to influence the software or ISG website in ways that were not intended, in particular with regard to bypassing existing security mechanisms.

6.5 The user is prohibited from independently using any trademarks, brand elements or logos that may appear in the online functions.

6.6 Legal notices relating to the online functions must not be obscured, altered or removed.

7. Granting rights of use and changing the scope of service

7.1 In accordance with these Terms of Use, STIEBEL ELTRON grants the user the non-exclusive right to use the online ISG functions, though this right of use is limited in its temporal, geographical and substantive scope to the duration and scope of the user relationship.

7.2 STIEBEL ELTRON endeavours to keep the range of online functions that can be used by the user as constant as possible.

7.3 The ISG and the functions should be subject to continuous development. Both the scope of service and operation regarding the online functions may change as a result of further developments. STIEBEL ELTRON reserves the right to make appropriate modifications, provided that the underlying functionalities are not negatively affected. STIEBEL ELTRON shall provide notification of any changes in a suitable form, in particular in release notes.

7.4 From time to time, STIEBEL ELTRON may provide software updates for the ISG, the portal and the online functions, which may also affect the scope of the online functions. If an update is necessary in order to eliminate faults or security risks, STIEBEL ELTRON reserves the right to perform the update automatically. All other updates, which are optional, can be installed by the user by selecting the corresponding function on the ISG. STIEBEL ELTRON is entitled to make its provision of the services owed under these Terms of Use and the remedying of faults conditional on the user having installed all updates provided for the ISG. Unless all updates provided are actually installed, STIEBEL ELTRON cannot warrant the availability of the online functions in the form described in these Terms of Use.

8. Warranty

8.1 STIEBEL ELTRON warrants that the online functions shall essentially meet the promised requirements, conform to accepted engineering standards and not contain errors that would negate or reduce the value or suitability for normal use or use stipulated in the contract (fault). This warranty does not extend to damage and/or faults resulting from breaches of these Terms of Use by the user.

8.2 STIEBEL ELTRON does not warrant that the functions shall meet the user's needs. The user bears responsibility for verifying this beforehand. The user is aware that STIEBEL ELTRON cannot guarantee uninterrupted provision of the online functions. Consequently, STIEBEL ELTRON does not bear any contractual obligation in this regard.

8.3 STIEBEL ELTRON warrants that the online functions are free of third party rights that would restrict or prevent their use in accordance with the scope set out in these Terms of Use. If the contractual use is impaired by third party intellectual property rights, STIEBEL ELTRON is entitled, so far as reasonable to the user, either to modify the services in such a way that they fall outside the protected domain or to obtain the necessary licence to ensure that the online functions can be used without restriction and without additional cost to the user in accordance with the provisions of these Terms of Use.

9. Remedy of faults and warranty claims

9.1 STIEBEL ELTRON shall in all cases remedy faults relating to the online functions within a reasonable time after being properly notified of the fault. At its own discretion,

STIEBEL ELTRON shall remedy software faults by eliminating the error, for example by means of a software patch, or by providing a new version of the software. The user bears an obligation to install updates provided by STIEBEL ELTRON for the software of the ISG where such updates are safety-related or are provided in order to remedy faults.

9.2 These Terms of Use do not cover measures to remedy faults relating to the hardware of the ISG. In this respect, only the purchase agreement for the ISG concluded with the dealer or other vendor shall apply. This does not affect any guarantees provided separately by STIEBEL ELTRON or any other party.

9.3 The user is aware that the online functions covered in these Terms of Use are offered by STIEBEL ELTRON without additional remuneration (further functions may be purchased from STIEBEL ELTRON for a fee irrespective of this; see in particular 2.2). In light of this, STIEBEL ELTRON broadly disclaims warranty claims by the user against STIEBEL ELTRON under the provisions of these Terms of Use. If any fault remedy is unsuccessful or refused by STIEBEL ELTRON, the user shall have no further claims. The sole option for the user is to terminate the user relationship, which may be done at any time. If the user has incurred loss or damage due to a fault, the limitations of liability under these Terms of Use shall apply with respect to any claims for damages. Irrespective of the above, any warranty claims against the respective seller of the ISG remain unaffected.

10. Infringement of third party IP rights

10.1 The user must inform STIEBEL ELTRON immediately in the event of any claims made against them based on infringement of IP rights relating to use of the online functions. In such event, STIEBEL ELTRON shall defend the user in respect of the alleged infringement at its own expense. If the user has nevertheless incurred costs for their own legal defence, these shall be reimbursed to the extent that they were necessarily incurred, in accordance with the limitations of liability set out in these Terms of Use. The user must provide STIEBEL ELTRON with the necessary substantive support to enable it to effectively defend against an infringement action.

10.2 If it transpires that the accusation of the infringement of third party IP rights was wholly or partly due to the user's culpable conduct, particularly if they did not adhere to the stipulations and limitations set forth in these Terms of Use, then the user shall be liable to indemnify STIEBEL ELTRON for all resulting damages and legal defence costs.

11. Liability

11.1 STIEBEL ELTRON's liability to the user is governed by the general legal rules on liability, unless otherwise stated in the sub-sections below.

11.2 STIEBEL ELTRON shall be liable without limitation for intent, in the event of injury to life, limb or health and in the event of claims under the German Product Liability Act (*Produkthaftungsgesetz*). Liability under guarantees provided by STIEBEL ELTRON remains unaffected hereby. STIEBEL ELTRON disclaims all other liability, or shall only accept liability to a limited degree in accordance with the sub-section below.

11.3 STIEBEL ELTRON disclaims liability for any form of negligence, including gross negligence. The user is aware that STIEBEL ELTRON enables use of the online functions

covered in these Terms of Use free of charge and that a reduced level of liability applies as a result.

12. Duration and notice of termination

12.1 The user relationship commences with immediate effect upon completion of registration and shall remain valid for an indefinite time.

12.2 The user may terminate the user relationship at any time. The notice of termination may be sent, inter alia, via email to info-center@stiebel-eltron.com, by letter to STIEBEL ELTRON GmbH & Co. KG, -Info-Center-, Dr. Stiebel-Str. 33, 37603 Holzminden, Germany, or by selecting the menu item for serving notice of termination. The user's notice of termination must contain the email address provided during registration along with the product ID (serial number), provided the termination is not effected by selecting the menu item for serving notice of termination. STIEBEL ELTRON may terminate the user relationship in its entirety or with respect to individual online functions upon three months' notice to the end of any calendar month. The data stored on the portal server shall be irrevocably deleted upon termination. The data stored locally in the ISG, on the other hand, is retained upon termination; however, this can be deleted by selecting the menu item for the deletion of local data (see 13.7).

12.3 If the ISG is registered again after its initial registration, the original user relationship ends automatically when the new registration is completed. There can only be one user relationship at a time for the ISG. Re-registration is only possible where a new user acquires the ISG from the previous user.

12.4 In the event of changes to the network to which the ISG is connected, STIEBEL ELTRON reserves the right to demand confirmation of registration or to demand re-registration.

12.5 The right to extraordinary termination remains unaffected.

13. Data protection

13.1 STIEBEL ELTRON takes the protection of personal data very seriously as required by data protection regulations. Personal data is information that can be used to identify a person. Such data includes the user's name, address and email address, for example. STIEBEL ELTRON observes data protection regulations with regard to the user's personal data and protects this data against unauthorised access by third parties in accordance with legal requirements.

13.2 STIEBEL ELTRON may process personal data insofar as this is necessary for the provision of the contractually owed services and for the purposes of technical administration and customer administration to the extent necessary in each case.

STIEBEL ELTRON may use the system data to improve product quality. Personal data may be used in this context to detect technical irregularities or imminent device failure and to prepare for and follow-up on customer service calls. This is intended, for example, to avoid repeated call-outs for the sake of the customer and of STIEBEL ELTRON.

If personal data is to be processed for other purposes, STIEBEL ELTRON shall obtain the user's consent for this, insofar as this is provided for by law.

13.3 STIEBEL ELTRON and third parties commissioned by STIEBEL ELTRON are expressly entitled to collect, process and use anonymised data for statistical evaluation.

13.4 The user has the right to information about the data stored concerning their person, the origin and recipients of the data as well as the purpose for which the data is processed. In addition, in accordance with the provisions of data protection regulations, the user has the right to rectification, restriction of processing and erasure of personal data if the conditions for further storage of the data are not/no longer met.

13.5 The user may revoke their declaration of consent at any time with effect for the future. If the user revokes their declaration of consent, STIEBEL ELTRON has the right to exercise extraordinary termination of the user relationship with immediate effect.

13.6 For questions regarding data protection law and to assert their aforementioned data subject rights, the user may email privacy@stiebel-eltron.com or, for example, use the general contact data for customer service. Without prejudice to any other administrative or judicial remedy, the user has the right to lodge a complaint with a supervisory authority, in particular in the Member State of their place of residence or the place of the alleged infringement, if the user considers that the processing of personal data concerning them infringes data protection regulations.

13.7 The user is advised that if the SERVICEWELT site is accessed from the local network by third parties, these third parties may also be able to access personal data. Such third parties may, for example, include a subsequent tenant or a tradesperson performing maintenance or repair work. In addition to the consumption values specified by the user themselves during the registration process, this applies also to those automatically collected by the device. The personal data stored locally can be deleted at any time by the user themselves by selecting the menu item for the deletion of local data. The data stored on the portal server and the data entered during the registration process can only be deleted by terminating the user relationship (see 12.2). Prior to the device being used by a third party, it is the user's responsibility to delete personal data by selecting the menu item for the deletion of local data. If the menu item for the deletion of local data is not selected, STIEBEL ELTRON shall not be responsible for the possibility of third parties accessing personal data or the resulting consequences.

13.8 STIEBEL ELTRON points out that the user is obliged to take responsibility for checking whether they are entitled under data protection regulations and other aspects to access and use the data available via the online functions, in particular insofar as this concerns data from third parties (such as tenants' consumption values).

14. Subcontractors

14.1 STIEBEL ELTRON is entitled to engage third parties to render services to be provided by STIEBEL ELTRON pursuant to these Terms of Use. In particular, STIEBEL ELTRON is entitled to entirely delegate the performance of the services vis-à-vis the user to a third party.

14.2 Irrespective of which services are rendered by third parties, STIEBEL ELTRON has a general obligation to the user to comply with these Terms of Use.

15. Choice of law and place of jurisdiction; dispute resolution before a consumer arbitration board

15.1 The contractual relationship and further agreements relating to the use of the local functions of the ISG are governed by the laws of the Federal Republic of Germany, to the exclusion of the United Nations Convention on the International Sale of Goods (CISG) and to the exclusion of international private law. If the user enters into a user relationship as a consumer and is, upon commencement of the user relationship, ordinarily domiciled in a country other than Germany, the application of that country's mandatory legislation shall remain unaffected by the aforementioned choice of law.

15.2 STIEBEL ELTRON is not willing and has no obligation to take part in arbitration proceedings before a consumer arbitration board.

15.3 The exclusive place of jurisdiction is in the courts of Holzminden, Germany; the place of performance is Holzminden, Germany. The foregoing rule shall not apply if the user is a consumer using the online functions solely for private purposes. In that case, the statutory rules shall continue to apply.

15.4 STIEBEL ELTRON shall provide the user with these Terms of Use in various languages. Only the German version shall be authoritative in the event of disputes and problems of interpretation. All other language versions are purely reference versions for the benefit of the user.

16. Final provisions

16.1 In the event that individual provisions within these Terms of Use should be or become invalid or unenforceable, the remaining terms shall not be affected thereby. The parties shall endeavour to find a provision that best meets the legal and economic objectives of the contract to replace the invalid or unenforceable provisions. The same shall apply in the event that the parties should later discover that the provisions of these Terms of Use contain contractual gaps.

16.2 Unless otherwise specified, the user relationship is established electronically. The offer itself is available in Danish, German, English, Finnish, French, Italian, Croatian, Latvian, Lithuanian, Dutch, Norwegian, Polish, Swedish, Slovak, Slovenian, Spanish, Czech and Hungarian. The text of these Terms of Use is available in Danish, German, English, Finnish, French, Italian, Croatian, Latvian, Lithuanian, Dutch, Norwegian, Polish, Swedish, Slovak, Slovenian, Spanish, Czech and Hungarian. The text of the Terms of Use (contract text) is saved as a PDF file. This is included as an attachment in the email sent to the user immediately after completion of the registration process. The Terms of Use are also available under www.stiebel-eltron.com/terms-of-use/isg-online.

16.3 STIEBEL ELTRON reserves the right to unilaterally amend and/or supplement these Terms of Use with future effect wherever necessary to protect the legitimate interests of STIEBEL ELTRON, particularly when new functions or any legislative changes are introduced. In such an event, the user shall be informed of the amendments and/or addenda at

least three months in advance. If the user does not object to the applicability of the new Terms of Use within two months of being notified (objection period), e.g. by sending an email to info-center@stiebel-eltron.com, the amended Terms of Use shall be deemed to have been accepted by the user. In its notification, STIEBEL ELTRON shall make the user aware of their right of objection and of the significance of the objection period. In the event that the user lodges an objection, they may continue to use the functions in accordance with the existing version of the Terms of Use, although STIEBEL ELTRON shall be entitled to terminate the user relationship for good cause. If no objection is made, the amended version of the Terms of Use shall enter into force on the day specified in the notification at 0:00:01 CEST.

Version: May 2018 (1)
