

SOL AS

COLLECTOR ACCESSORIES

PRODUCT-NO.: 230184

The side flashing set SOL AS is designed to link the collector arrays to the existing roof cover. The flashing is fitted to the side of the collector array (left and right) to seal the roof securely against precipitation. One of these sets is required per collector assembly. The standard delivery also includes the plug-in connector SOL SV-R for the hydraulic connection of a collector assembly. The SOL AZ cover extension is used for two collectors installed one above the other, in the transition from the lower to the upper collector. The extension conceals collector connections and hydraulic lines.

The main features

For integrating the collector arrays into the existing roof cover

SOL SV-R push-fit connection included in the set

Installation information

Please ask your local power supply utility or a registered electrician to install appliances that are not fully wired, i.e. ready to plug in. The electrician should also be able to assist you with obtaining the agreement of the respective power supply utility required for the appliance installation.
